

## **Directions for Using the Computer Projector and Laptop**

When you are using the computer projector, you sometimes have problems and you need to turn off the projector and the laptop and start over. This takes time, so I suggest you start the project early. Two other things to check before turning the projector/laptop off are: make sure everything is plugged in and make sure that all the cables are connected.

Plug in projector

Press green “on” button

Take off lens cap (be sure to put it back on afterwards)

Wait until picture is projected on screen

Connect projector to laptop by plugging cable to the projector in the blue input slots

Turn on computer (wait awhile!)

If you are using the Solel laptop, click on “Temple Solel School” (wait awhile!)

Click on Internet Explore

Find your website

If your picture is only showing on the laptop or only showing on the screen, you need to press Fn and F8 (on the Temple laptop). If you have a Mac, go to settings and preferences. In preferences, go into image.

To adjust the volume, click on the picture of the speaker and adjust.

If you need speakers, plug them in on the side of the computer where it shows a picture of headsets.

For full screen, press the picture of a smaller screen inside of a bigger screen (it looks a little bit like an American flag).

If you are not getting wireless internet, you can click on the icon on the bottom of the screen that looks like two computers (network connections) and it will tell you the list of wireless networks available. Click on the closest one to you. If that one does not work, try another one!!

When you want to turn off the projector, press red standby button twice and let it turn itself off (it takes about five minutes).

Good luck!!
