

TBT Guidelines for All Services

1. We will continue to offer Shabbat services on Livestream and daily services on Zoom.
2. People in higher risk categories for COVID-19¹ should consider not attending the in-person services and watch on Livestream or Zoom instead.
3. **Vaccine-eligible attendees must be vaccinated** and must provide proof of vaccination to the synagogue. This can be done at the time of entrance by showing a vaccination card or Excelsior Pass. This can also be done by providing proof of vaccination to the office, in which case you will be placed on a list that permits entry without the need to show proof each time.
4. Anyone attending is certifying they feel healthy, are not experiencing any COVID-19 symptoms, have a temperature less than 100.4 degrees and have not been close to unvaccinated people outside their home who were unmasked and failed to follow social distancing for more than five minutes or were in close contact with persons exposed to COVID-19. If you have a chronic cough, even if you are healthy, we ask that you not attend.
5. **All attendees must wear a mask** that covers their nose and mouth at all times (no gaiters or bandanas or masks with valves). If any mask is removed, the leader will stop the service and remind the person(s) of the mask requirement. Children over the age of two must wear a mask. No eating or drinking in the sanctuary.
6. Attendees are encouraged to bring their own kippah and tallit.
7. Attendees should remain at their seats throughout the service. Individuals having aliyot or other honors may approach the Torah.

¹ According to the CDC, people over the age of 65 (especially those over 75), as well as persons with asthma, (moderate-to-severe), cerebrovascular disease, chronic kidney disease, COPD, cystic fibrosis, diabetes, hypertension or high blood pressure, immunocompromised state, liver disease, neurologic conditions (such as dementia), obesity (BMI of 30 or higher), pregnancy, pulmonary fibrosis, serious heart conditions (such as heart failure, coronary artery disease, or cardiomyopathies), sickle cell disease, smoking, thalassemia, as well as children who are medically complex, who have neurologic, genetic, metabolic conditions, or who have congenital heart disease are at higher risk for severe illness from COVID-19.
