Lunch to
Follow

LEARN ABOUT NEW AND EXCITING TESTS THAT ARE AVAILABLE WITHOUT COST,
THAT WILL HELP ANSWER SOME IMPORTANT QUESTIONS:

Do you wonder what your risk for certain types of cancers are?

Do you know the answers to many health questions locked inside your genetics?

Would you like to know about the risk for your children or grandchildren?

Do you know that medications may work differently for people based on their genetic
makeup and DNA?

How can you assure that medications will work properly for you?

After the presentation, those who qualify and want to find out their risks may choose to have our healthcare professionals administer two of these tests. The test consists of a simple cheek swab. (No needles or blood involved). The test is done with zero out of pocket expense to those who have Medicare part B or Medicare PPO.
